What is it?

The National Plant Monitoring Scheme (NPMS) is organised and funded by BSBI, CEH, JNCC and Plantlife. The aim is to collect data to provide an annual indication of changes in plant abundance and diversity.

Michael Proctor, CEH

Why is it needed?

Thanks to volunteers, we have a very good understanding of changes in the populations of birds, butterflies and bats. Plants are the foundations of ecosystems, but currently we do not have a good measure of changes in plant populations.

Michael Proctor, CEH

How will it work?

This is a scientific survey, so you will be randomly allocated a convenient 1km square to visit. The visit involves recording plant 'indicator species' in plots. Within your 1km square you will record around 5 plots.

Michael Proctor, CEH

Who can take part?

Anyone interested in nature who can identify plants, or who is keen to learn. Different levels of participation ensure that all who are keen can participate: you do not have to be an experienced botanist. There will be training materials provided and the opportunity to attend workshops throughout the year.
